

When I move the mouse over a field a help message is displayed.

The image shows a registration form with the following fields and icons:

- Name: [input field] ★ ⓘ (A blue arrow points to the ⓘ icon, which has a tooltip that says "Please enter your real full name.")
- Username: [input field]
- Password: [input field] ★ ⓘ
- Verify Password: [input field] ★ ⓘ
- Email: [input field] ★ ⓘ

The question is how could I create a help message for a custom field via override for example for Greek language
